

The smart MDC
alternative:
SmartMONITOR

SmartMONITOR is a way to quickly and easily gather reliable data and optimize your manufacturing processes. It is a simple, wireless solution for analyzing your entire production facility at a glance.

You can react quickly, increase efficiency, document problems and keep up to date - if the status of a machine or workstation changes an email can be sent to the proper person.

SmartMONITOR consists of a wireless transmitter, wireless receiver, and the included software as well as optional signal towers.

Transmitter, Wireless Data Monitoring

- Monitors the status and counts the output of up to 50 machines or workstations
- Data transferred wirelessly to the receiver
- Initiates processes, starts and stop machines
- Can be integrated with a signal tower as an additional element

Receiver, Secure Data Collection

- Receives all the data sent by the transmitters in the network
- Transfers and saves the data to a Microsoft SQL database

Software, Central Control Station (Included, has integrated analysis and reporting tools)

- Easy to install and leads you through a series of steps to establish an individual network
- Offers an overview of all machines, equipment, and workstations
- Retrospective analysis of data
- Process optimization
- React quickly to production disruptions
- Product reports
- Displays status condition of status light (if used)

Signal Lights (Optional)

- Visual alerts
- Never miss a critical situation
- Everything is documented and the reports also show you how to improve your processes and productivity!

SmartMONITOR can help you with production monitoring, material flow, initiating processes and machine monitoring.
